

Metastatic Breast Cancer to Bone and Liver

Patient

43 year old woman with metastatic breast cancer to bone and liver. (Emma Ward, 2014 Mar 8)

Treatment

1. Vitamin D3 at 20,000 IU per day (blood levels must be monitored). (Thyer L, 2013 Jul 8) (den Hollander P, 2013 Sep 23)
2. Very low carbohydrate diet with protein (Master Amino acid Pattern - MAP®) and high fat, known to correlate with stable disease or partial remission i.e. Dietary Ketosis. (Fine EJ, 2012 Oct 28)
3. Drink at least 2 litres of water per day. (Emma Ward, 2014 Mar 8)
4. 140mls daily of Bravo yoghurt containing naturally occurring OA-GcMAF. (Artym J, 2013 Aug 6)
5. Bravo suppositories containing 200ng of OA-GcMAF. (Emma Ward, 2014 Mar 8)
6. 100mg daily of acetylsalicylic acid (aspirin). (Thorat MA, 2013 Dec 15)
7. 880ng of OA-GcMAF daily. (Emma Ward, 2014 Mar 8)

Results

Fig. 4. Ultrasonography of breast cancer. A 43-year-old woman was diagnosed with metastatic breast cancer to bone and liver in February 2013. After 1 week of integrative immunotherapy where OA-GcMAF (880 ng/day) was administered by localised subcutaneous injections, the primary tumour at the level of the breast, measured with ultrasonography, showed a decrease of calculated volume from 1.8 mL (panel A) to 1.3 mL (panel B). This corresponds to approximately a 28% overall reduction. This case was representative of four other cases of breast cancer that qualitatively gave similar results
